### MED Cloud Announces “Go Live” Capabilities of GE Healthcare’s Centricity Practice Solution as a SaaS Solution

**Towson, MD, *December 11, 2011*** – MED Cloud, a medical technology company providing Electronic Medical Record solutions to small practices, today announced the “Go Live” capabilities of their GE Centricity Practice Solution. MED Cloud has already begun signing on practices for the EMR services.

MED Cloud has partnered with GE Healthcare to provide GE Centricity Practice Solution (CPS) as a Software-as-a-Service (SaaS) solution. This hosting service allows small practices to utilize CPS and all of its capabilities at a fraction of the cost without having to spend hundreds of thousands of dollars on software and hardware. For a small monthly fee, practices can now afford an extremely powerful and robust EMR system to boost profitability and services for patient care.

SaaS is a software delivery method that provides access to software and its functions remotely as a Web-based service. SaaS allows organizations to access business functionality at a cost less than paying for licensed applications since SaaS pricing is based on a monthly fee. Also, because the software is hosted remotely, users don’t need to invest in additional hardware. SaaS removes the need for organizations to handle the installation, set-up and daily upkeep and maintenance.

#### **About MED Cloud**

MED Cloud, founded in 2011, is a Maryland-based company providing technical consulting services and the GE Centricity Practice Solution (CPS) EMR system to medical practices. MED Cloud is the only company partnered with GE Healthcare to provide GE’s CPS as a SaaS model.
